

Another NEW Time Saver From

LECTROTECH INC.

Model T-100

**Price
Only**

\$19.50

Including Battery

**Horizontal
Deflection Circuit
Meter**

**Detects Horizontal
Deflection Circuit
Troubles**

**Without Connecting
To The TV Set**

**without even
Removing The Back**

Works on Color or Black and White

This amazing new instrument weighs only 8 ounces. It measures just $3\frac{3}{8}$ inches by $2\frac{3}{4}$ inches by $1\frac{1}{2}$ inches. Fits easily in the palm of your hand, and instantly indicates any defect in the horizontal deflection circuit of a TV receiver, without connection to the set. You don't even have to take the back off. Since no connection to the set is necessary, there is no possibility of introducing new unrelated troubles because of electrical connections. Also, since this is a meter, it avoids the misleading neon light type of indication. Battery powered, no AC connection necessary. Saves time — increases profits.

The T-100 uses a basic electronic principle to sense the high energy radiation of the horizontal deflection circuit. Horizontal deflection circuit troubles include defective fly back, yoke, horizontal oscillator, horizontal output tube, damper tube, high voltage rectifier etc. The T-100 will also detect high voltage difficulties where the voltage is too high, too low or fluctuates. Now it becomes easier to estimate repair costs for your customer, before taking the set to the shop. More accurate estimates result in more satisfied customers, more business for you and more profit.

Eliminate the Dry Battery **from your VTVM for Life**

with

Lectrocell

A miniature DC Power Supply that furnishes the
1½ Volts DC necessary to measure resistance
with any make or model of VTVM.

*Install It ...
Forget It!*

Price \$3⁹⁵

Every VTVM needs a source of DC at 1½ volts, in order for it to be able to measure resistance. At present these meters use a 1½ volt dry battery mounted in a compartment inside the VTVM. It is only natural to neglect to replace this battery at regular intervals, with the net result that the battery runs down just when you need it, or even worse, it bleeds and corrodes the internals of the meter.

Lectrocell is not a battery. It is a true miniature power supply, of exactly the same shape and size as a battery. Consequently it fits in place of the battery, and when hooked up (this takes only a few minutes) it furnishes a permanent source of DC at 1½ volts from then on. Install it—forget it! Fully guaranteed and priced at only \$3.95.

PROTECT YOUR METER MOVEMENT

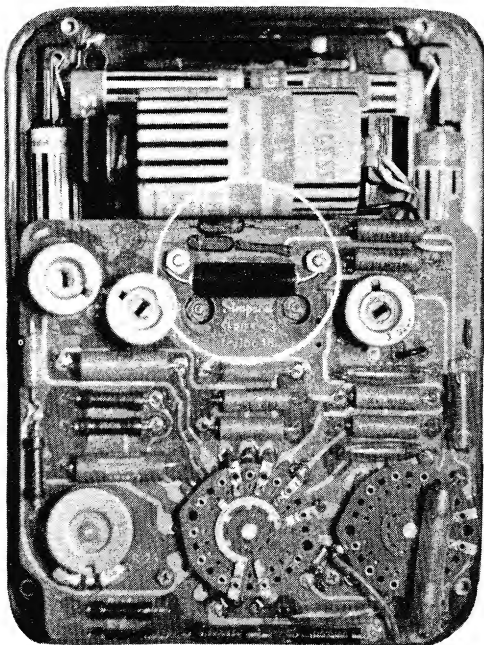

from Accidental Overloads!

*Bring it Up to Date
Make it Burnout Proof*

WITH

etergard

No More...

- BENT POINTERS
- DAMAGED PIVOTS
- OVERHEATED SPRINGS
- BURNED-OUT COILS
- OTHER OVERLOAD DAMAGE

◀ **METERGARD**
installed in
Simpson Model 260

Price \$2⁹⁵

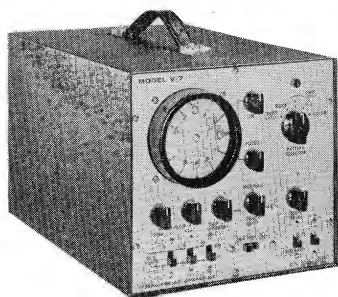

Most Higher Priced Models of Volt-Ohm-Meters now feature protection against accidental overloads. NOW you too can protect YOUR multimeter, regardless of make, against overloads. Meter repairs are expensive and so is the time lost waiting for repairs. Metergard protects your meter movement against more than 10,000% overload. Takes only a few minutes to install. Fully guaranteed and priced at only \$2.95.

**If You Work with Color TV
You Need These Two Great Color Instruments**

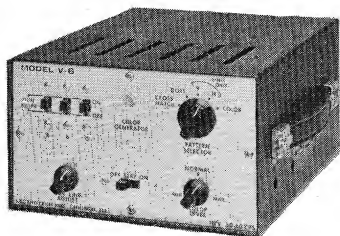

Model V7 with Vectorscope

**Sensational New Color
Generator — Obsoletes
All Others**

**Install or Service Color TV Faster,
More Accurately and More Com-
pletely Than Ever Before.**

**Price
\$189.50**

Vectorscope is exclusive with Lectrotech. Only a vectorscope permits visual inspection and alignment of color circuits in minutes. It visually measures the angles between the 10 color bars. Our complete catalog sheet tells how and why. In addition V7 supplies cross hatch, dots, vertical lines only, horizontal lines only, keyed rainbow color pattern, red-blue-green gun killer, (including Motorola 23") voltage regulated timer circuits, and solid state reliability.

Model V6

**Color Generator without
Vectorscope**

**Price
Only \$99.50**

Model V6 is the completely new — advanced color generator, with all of the time tested features plus several Lectrotech exclusives, at an unbelievably low price. Supplies crystal controlled, keyed rainbow color display, cross hatch, dots, vertical lines only, horizontal lines only, red-blue-green gun killer, solid state reliability, voltage regulated timer circuits, color level control, and line isolated power transformer. All cables are permanently attached and housed in a closed compartment on both V7 and V6.
